

ABSORBENTS & CONTAINMENT

WE ALL KNOW ACCIDENTS HAPPEN!

The most important question is—**Are you prepared?**

You need a **Spill Response Plan** ready to go at moment's notice.

Creating your plan depends on the size of your facility, your industry, and the type of chemicals or hazardous fluids used and stored. These are key factors when choosing which absorbents to have on-hand when accidents happen.

Workplace safety and environmental contamination protection are no joke. We can help you prevent costly leaks, meet pollution mandate requirements, and contain dangerous spills for manageable, easy cleanup—all with eco-friendly solutions.

INVENTORY CHECKLIST:
