

MIST EASE

Microdosing Lubricant

DESCRIPTION

Mist Ease is a high-quality, low viscosity vegetable-based oil recommended for use as a microdosing lubricant for machining ferrous and non-ferrous components. Mist Ease has a uniquely low surface tension that enables very small quantities to spread out and wet large surfaces very quickly. Combining this low surface tension characteristic with high film strength and superb lubricating properties gives Mist Ease the ability to product components with superb surface finishes at feeds and speeds not previously advisable.

FEATURES

- Micro lubricant—low usage, cost-effective
- Low surface area—ease of wetting/spreadability
- Highly lubricious—excellent surface finish
- Minimal application—minimal drag-out on surface and minimal disposal/environmental issues
- Excellent oxidation stability

HOW TO USE

Use straight from the container, no dilutions.

SPECIFICATIONS

Physical Form	Liquid
Color	Yellow
Odor	Mild
Specific Gravity	0.919
Flash Point (TOC)	600°F
